SUMMARY

Senior Software Engineer with 8+ years of experience designing and shipping scalable, distributed systems, and 3+ years leading high-impact engineering teams. I architect AI-driven platforms that turn fragmented operational data into decisions: from real-time anomaly detection over high-volume event streams to LLM-agent layers that orchestrate logistics, inventory and field operations end-to-end. Pursuing a Master's in Applied Artificial Intelligence at Universidad de los Andes, with an MIT Applied Data Science certification. Comfortable across the full stack: from Rust and Node.js services to ML in production and multi-agent architectures. I believe technical leadership is about building excellent systems and growing the people who build them.

EXPERIENCE

Technical Lead · Stefanini LATAM

Apr 2023 - Present

Agent-first field-operations platform with multi-service integration support · Clients: OXXO, Transbank, Caja Los Andes

- Designed and now lead **Stefanini Go**, a modular platform covering logistics, inventory, field operations and workflow automation, with an AI-agent layer that aggregates data across critical sources to drive operational decisions.
- Delivered a **60% reduction in SLA resolution times** and improved compliance **from 77% to 94%** across enterprise deployments.
- Led the production rollout of the **OXXO ServiceNow bidirectional integration**, modernizing 10 microservices with significant SLA and compliance gains.
- Translate ambiguous business and technical requirements into actionable architecture and roadmaps; mentor engineers, drive technical standards, and own delivery end-to-end.
- Stack: Node.js, NestJS, TypeScript, Angular, MongoDB, Elasticsearch, AWS, ServiceNow integrations, LLM-agent pipelines.

Senior Full Stack Developer · MillerKnoll

Apr 2023 - May 2024

Intelligent furniture-distribution platform for large US construction companies · Remote

- **Compass**: intelligent furniture-distribution engine at industrial scale. Ingested CAD blueprints of entire buildings, took space-type classification from users, and generated multiple optimal layouts combining genetic algorithms, stochastic search and decision trees, with 3D visualization for client approval. Optimized the generation algorithms to scale across buildings with hundreds of spaces without degrading performance, drove architectural decisions on the calculation engine, and worked directly with US design teams to bring the tool into real, large-scale construction projects.

Senior Software Engineer · OmnixAI

May 2019 - Apr 2023

Distributed systems and applied ML across logistics, anomaly detection and process automation · Clients: WOM, Entel, Logytech, Casaideas

- **Distributed tracing system**: implemented end-to-end tracing (correlation ID + service + transaction ID) over a distributed search engine across hundreds of microservices. Reduced average debugging time **from ~8 hours to ~1 minute**.
- **ML in production**: designed Isolation Forest models with custom feature engineering over historical logistics data, detecting **20% more delayed orders** and directly improving operational SLAs.
- **Entity self-discovery**: built a system combining Graph Neural Networks, embeddings and LLMs to automatically classify unlabeled JSON data from heterogeneous sources.
- Designed and built scalable cloud-native architectures on AWS, leveraging multiple managed services, with MongoDB and Postgres; mentored engineers and drove engineering standards across teams.

Backend Developer · Grupo Formax

May 2018 - May 2019

- Built backend services and APIs for enterprise process automation. Foundations in software architecture, relational databases and cross-system integrations.

FOUNDER · INDEPENDENT PROJECTS

Founder & Engineer · Braincol

AI Systems & Developer Infrastructure

2024 - Present

Verve · Agent-native programming language

- Designing and developing a general-purpose programming language built for AI agents to express software requirements in a canonical, contract-based syntax. The architecture connects human intent and agent-authored specifications to formal analysis and native code generation.
- Driving the compiler's migration from **Python to Rust** while retaining **LLVM** as the native-code backend. Defining strong static typing, contracts, memory and concurrency semantics, with an emphasis on deterministic compilation and specification-driven validation.

Foresight · AI orchestration runtime

- Designing an AI orchestration runtime that decomposes complex tasks into dependency graphs, coordinates execution and routes work to eligible models and tools. The architecture integrates **Decomposer, DAG/state engine, Router, Compute registry and Composer**.
- Separating orchestration from model hosting, with routing based on resource capabilities, availability, latency and cost constraints. Defining failure recovery, rerouting and result composition to coordinate heterogeneous AI providers and compute resources.

EDUCATION

Master's in Applied Artificial Intelligence · Universidad de los Andes

Applied Data Science Program · MIT Professional Education

Software Engineering, emphasis in Computer Science · Universidad del Norte

2024 - Present

2023

2020

TECHNICAL SKILLS

Languages	TypeScript · Python · Rust · JavaScript
Backend & APIs	Node.js · NestJS · Fastify · Express · MikroORM · REST · microservices · event-driven architectures
Frontend & Mobile	Angular · React · React Native · Expo · Tamagui · TanStack Query
Databases	PostgreSQL · MongoDB · Elasticsearch · Redis · vector databases · SQL
Cloud & Infra	AWS · Azure · Docker · Kubernetes · Helm · Terraform · Cloudflare · Supabase · Stripe
AI & ML	LLM agents · MCP · RAG · agentic pipelines · GNNs · embeddings · Isolation Forest · autoencoders · clustering · feature engineering · Claude Code
Practices	Clean Architecture · DDD · SOLID · design patterns · multi-tenancy (RLS) · CI/CD · IaC · distributed tracing · observability · SCRUM · technical mentorship
